

OnCore and Epic

Where we are Post Go-Live

Bridget D. Strong-Benson, PhD(c), MBA, CCRP

Director, Clinical Research Education and QI

- 20+ years of Clinical Research experience (Regulatory, Financial, Educational, Compliance, and Clinical)
- Project Manager/Lead for 5+ implementations at Emory
- Led training for Emory Research Management System (ERMS)
- Attended 10-week Bootcamp for OnCore Training
- Attended Epic Training to assist Emory & Emory Healthcare clinical research community
- Collaborates with University of Kentucky, University of Florida, Yale University, and MD Anderson Cancer Institute to understand both OnCore and Epic alignment.
- Board member of professional organization – Society of Clinical Research Association (SoCRA) to advocate for clinical and advise on guidance to support our current and future clinical research workforce.

Topic Points

- OnCore Clinical Trials Management System (CTMS)
- Epic Medical Record System
- Alignment of both systems
- Where we are today?
- Open Discussion/ Questions

OnCore CTMS

- Implemented **10/01/2022**; replaced ERMS
- **Goal:** To provide a system that reduces redundancy in the clinical research workflow and provides transparency and accountability.
- Over **500+ institutions nationwide** utilizes OnCore, and you find them at institutions that has a large volume of cancer-related trials (i.e., Emory Winship Cancer Institute).
- OnCore at Emory has over **1200+ clinical research studies** in the system, especially studies that have billable items/services.

Epic Medical Record System

- Implemented **10/01/2022**; replaced PowerChart
- **Goal:** To align with Emory University OnCore CTMS for transparency in clinical research.
- Founded in a basement in 1979 with 1½ employees, Epic develops software to help people get well, help people stay well, and help future generations be healthier.
- More than 300 million patients have a current electronic record in Epic.

OnCore to Epic

Director, Clinical Research Education and QI

Where are we today?

90 days since implementation – **working as designed; it's a true CTMS.**

1. *Trial and Error*

- Three issues: IRB Expiration Dates d/t Huron API, Calendars to be modified d/t missing data or incorrect data, and Inability to track visits

2. *Upcoming upgrades in the Spring*

- Preparing for any changes
- Several staff attending vendor conference – OnSemble – to continue to gain knowledge and understanding for improvements.
